

— REBOX INCREASES EFFICIENCY, ONE BOX AT A TIME

Established in 1990, Rebox empowers more than 350 manufacturing plants to think outside the box.

THE IMPACT

DID YOU KNOW...

Rebox helps manufacturing plants become more efficient by eliminating or optimizing processes. This allows employees to realize increased job satisfaction which contributes to a better working environment.

The process is simple:

- 1** At the manufacturing plant, boxes are flattened and placed on pallets or in gaylords at the front or end of each line.
- 2** Full pallets or gaylords are then placed in a 'box only' trailer.
- 3** Once a call is made, Rebox facilitates a trailer swap so that its partners can continue collecting boxes.

THE BENEFITS:

- You can save up to 50 pallet spaces on the plant floor.
- You can eliminate up to 3 handling points with Rebox, compared to the labour required in the baling and compacting process.
- Employees can focus more heavily on their areas of expertise instead of the by-products of manufacturing.
- Manufacturing plant employees satisfaction rates increase, which leads to smoother operations and quality output.

"For many manufacturing plants, productivity is the most important success factor. I've worked with many partners in implementing the Rebox program which eliminates multiple tedious and lengthy tasks on the line. A productive plant is a happy plant!"

- Jeremy Weis Heitner, Sr. Business Development Manager, Rebox
