

REBOX

CASE STUDY:

How Rebox helps a dairy manufacturer become more operationally efficient

OVERVIEW

Since 1990, our vision has been to help our partners create added value by thinking outside the box. Serving more than 350 manufacturers in North America, our expertise lies in implementing successful reuse programs. The process is simple. Manufacturing plant operators are asked to flatten boxes and place them on pallets or in gaylords, at the front or end of each line. Once they're full, we'll facilitate a trailer swap, so that you can continue collecting boxes.

CHALLENGE

Level of productivity is at the forefront of manufacturing plants' key performance indicators. However, a dairy manufacturer in Texas was failing to boost operational efficiency, due to the plant's use of a baler which affects time and labor. The baling process involves seven steps: break boxes down, place them in a bin, move them to a baler, place the boxes in the baler, bale the boxes, remove the bale and move the contents to a trailer. The baling process requires at least three employees, additional space on the plant floor and significant time dedication, which negatively impacted efficiency for the dairy manufacturer.

SOLUTIONS

At Rebox, we provide a simple solution that creates operational efficiency. For this Texan dairy manufacturer, we eliminated the need for a baler, allowing employees to focus on their areas of expertise and contribute to a better working environment.

Here's how:

- Simple 4-step implementation:
 - (1) break down the boxes
 - (2) place the boxes on a pallet
 - (3) strap the boxes to the pallet and
 - (4) move it to a trailer
- Seamless implementation and support
- Saved time, space and labour on the plant floor

RESULTS

By partnering with Rebox, this Texan dairy manufacturer benefitted from:

Increased
**employee
satisfaction**

The **elimination
of 3 handling
points** in the
waste process

Savings of up
to **50 pallet
spaces** on the
plant floor

"Spending time in Texas, I've realized the role that employees play in a plant's productivity. An employee that's happy will work more efficiently. Rebox eliminates tedious, lengthy steps, making employees more happy and increasing the plant's operational efficiency."
